

ACQUAMARK®

Developed by nature

The ACQUAMARK® - cork offers a first-rate sealant, with a water-based coating, to give all the characteristics of a natural cork stopper. The coating on ACQUAMARK® corks utilizes a restructuring process in conjunction with a water-based solution. Cork extracts are fixed to the walls of the cork Stoppers, filling in the lenticels, and thus greatly increasing the product's sealing capability.

This innovative manufacturing method from AMORIM ensures total particle retention, avoiding any migration to the bottled wine. ACQUAMARK® corks are, therefore, an excellent option for those seeking the security and prestige of a natural cork stopper, but at a highly competitive price.

ACQUAMARK® cork is available in the size:

45 x 24 mm

Qualities: Premium Vintage Classic
